Title: Full Stack Engineer

Dear Hiring Team,

I am excited to apply for the Full Stack Software Engineer position at DoiT. The opportunity to contribute to the development of the CloudFlow product for global customers aligns strongly with my skill set. I have hands-on experience building SaaS products and implementing automation through n8n. One of my most impactful contributions has been developing Aevita, a SaaS platform for health professionals and patients.

I led core feature implementations, including role-based dashboards, Stripe integrations for both subscription and one-time payments, and complex automation workflows using n8n. This work strengthened my ability to propose meaningful improvements, collaborate effectively with cross-functional teams, and maintain a clean, scalable codebase.

Beyond technical expertise, I bring a self-driven mindset, strong communication skills, and a proactive approach to problem-solving. I enjoy tackling challenging issues, reviewing code thoughtfully, and contributing to a positive, supportive, and fun team environment.

Thank you for considering my application. I would welcome the opportunity to discuss how my experience and enthusiasm align with DoiT's mission and how I can contribute to the continued success of CloudFlow and its future integrations.

Warm regards,

Robin Rana
